

DOAST ITC Challenges The Dogma of Autism Management

Integrated Therapy

FAST FORWARD our Traditional Medical Science **PAST** into the **FUTURE**

GOOD ENOUGH Research Leads are better than
THE everevasive PERFECT research outcomes.

Global
Medical
Tourism

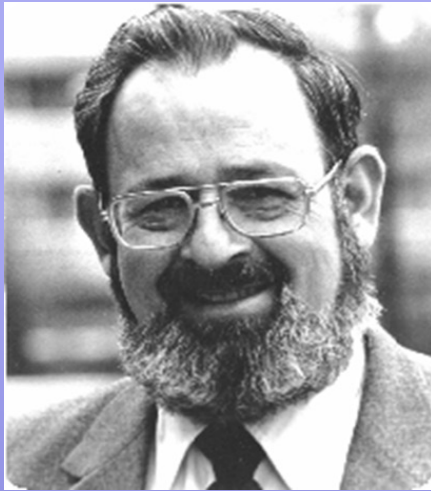

“The **wrong macromolecules** at the **wrong place**,
at the **wrong time** generate chronic inflammation,
tissue degeneration and chronic disease”

‘Symptom by Symptom’ Approach is NONPRODUCTIVE.

*Activate dormant neuronal pools by addressing inflammation.
Thereby improve the connectivity and restore functional integration.*

Why? Challenge The Dogma

**Rimland Did it in 1964.
Founded
ASA
[Autism Society of America]**

- ✓ Since 2003 DOAST ITC concentrates on the coherent view on brain function within the framework of other organs.
- ✓ Through this treatment window we **treat autism** better by addressing the underlying interconnected biological processes.
- ✓ **Such way we Challenge the dogma and replicate positive transformation in behavior and cognition.**

**‘Cognitive, emotional and synaptic functions
of the brain**

**rely basically on the macromolecular
computing system of**

**DNA-RNA- RNA- Protein- and protein to
protein interactions**

**which appear to be the result of fine-grained
information, encoded and accumulated over
evolutionary time’.**
