A DOGMA CHALLENGING ENDEAVOR

I am a Otorhinolaryngologist [ENT Surgeon] Gold Medallist from Madras University, India. Year 2000, I was scared to look at the rising numbers of children with autism with NO CREDIBLE TREATMENT. My heart bled to witness such parents spend sleepless nights wondering **‘What is the plight of our child after us’.**

Year 2003 I resolve to deviate from my lucrative professional path to work on Autism treatment research. By then the mainstream medicine has declared that ‘Brain in Autism is hardwired’ and difficult to treat. Hence my decision to conceptualise a biological path to ‘Rewire the brain’, was a bold and crazy.

- Since 1987 I travelled with Sidha practitioners to explore the hidden potentials of Ancient Indian medical science. The knowledge thus gained possibly gave me the confidence to take this bold plunge.
- Carefully studying the GOOD ENOUGH mainstream research leads, I ingeniously hypothesised a pathophysiology/ treatment window for autism, based on gut brain axis and neuroglial inflammation.
- **I conceptualised a matching treatment protocol called ‘Integrated therapy’. My brainchild ‘Integrated therapy’ is a unique concept to combine proven ancient Indian medical practices in synergy with the mainstream research and evidence.**
- This biological approach proved transformative and propelled DOAST Integrated Centre for Autism [DOAST ITC] & SADANIKETHAN MISSION into unique ONE STOP ideal ecosystem to control the behaviour and improve cognition of individuals with autism.
- This maiden clinical path laid by me, choosing **‘meaning over money’** continues to transform lives, and brings peace into traumatised families.

From 2003 to 2026...perseverance tested to the limits...

- Two decades back, precisely in 2003, when I started working on ‘AUTISM’ a grey area of medicine, **My Colleagues called it career suicide.**
- My family hesitated to say it, but I saw it in their eyes when I traded private consultations to serve disability dwindling my income,
- Autism did not have a neat billing code, Insurance did not pay,
- But the children through INTEGRATED THERAPY started passing stools regularly,
- Their dependence on the diapers reduced,
- Children who did not look at the face started looking into the eyes of the mother,
- The hyperactivity reduced, they slept well,
- They did not fall sick frequently as before,
- Their behaviour and cognitive abilities improved,
- In children with seizures intensity reduced and frequency of occurrence reduced,
- Activities of Daily Living skills improved with less parental assistance,
- Considerable number of children began to speak without speech therapy,
- As years passed by, parents started calling from other states, whispering, ‘They said you could help’
- I realised that my Unique biological path of treating autism is consistently replicating transformative results.

The other side of replicated clinical progress

I was awake by 4 am brooding over the alarming financial spreadsheets, Grants rejected. Donors drying up. The treatment works, but the expenses far exceed the income. I stare at the reality repeatedly ‘How do I keep doing the right thing when the world will not pay for it?’

Never, Never...Never give up... Waves are inspiring, not because they rise and fall. But they never fail to rise again

- ❖ Tried all the logical things first. Wrote for grants until hands cramp.
- ❖ Bordering onto begging, pitched to investors/ philanthropists who nod, smile, and ask, but what is the scalable model? As if healing isn't scalable unless it comes in a pill bottle.
- ❖ Despite the constant pressure I Concurrently run the ENT clinic to keep the lights on. Lesser time devoted to ENT practice affected the patient's confidence and earnings.
- ❖ *When my spirits run abysmally low, a child would walk in to say 'Hello Doctor Karthikeyen' [She is now 6 and when we started working on her by age 3, she was nonverbal] This elevates my spirits to get up and walk a little further.*
- ❖ One night I designed an email to the parents of every kid treated. Subject line: I need help keeping this door open. I hated sending it, but I sent it anyway. The replies started trickling in miniscule amounts.
- ❖ The hard truth comes too. A few donors write back: We only fund research with FDA pathways. Another: Autism isn't curable, why keep chasing this?
- ❖ As if this is not enough, the shock of covid came by, scary to send the last nail into the coffin. Struggled and survived the lockdown with some magnanimous donations from known friends. The funds evaporated like water spilled on the desert sand,
- ❖ Post covid, overseas patients dried up. Courageously started swimming with head above the water banking on my own ENT earnings,
- ❖ A biotech firm came in to license my protocol. Big money. Real money. The catch: they want to patent it. Lock it down. Charge exorbitant per child. *Not able to accept the extortion of already suffering parents* I decline the offer.
- ❖ Years roll by with struggles overcome by my 'one man army' attempts.
- ❖ Then one fine day an Angel walks in with a message from God. *He is a BUD blossomed into a FRUIT through Integrated Therapy. Years back he has returned to his country and is earning and independent.* He pulls out his wallet. *'I can't give much yet. But I want to chip in for the next kid who needs your treatment'*.
- ❖ Overwhelmed by his gesture/message, tears rolldown my cheeks. It magically erases the painful memories of my obstacle race I am running for more than two decades.
- ❖ *Gives me a sole satisfaction for choosing meaning over money way back in 2003.*

Thank you for your time but my autobiography is not yet complete.

I STILL FEEL LONELY IN THE PATH of DOAST ITC designed by GOD to me.

**With only sacrifice and stubborn hope I look at the miles to travel
before I bring lasting peace into families.**

***Please travel with me to pump in energy and enjoy the
ecstasy of soul satisfaction.***
